TSK CONNECT TEST ADAPTER [MODULE]

TSK Connect is the next step into advanced digitalization for wire harness testing.

Core benefits of usage of this new digital technology are significant time savings in project setups plus reduction of handling and process cost.

The setup time optimization of a standard harness test system, as well as the increase of equipment maintenance efficiency, answers to requirements like increased flexibility, faster operational features and improved productivity to enable industrial process digitalization.

Reduced process costs

- Increased flexibility – the product fits to your current test infrastructure and production needs.
- Significant setup time optimization for fast availability of wire harness test system.
- Reduction of handling and process cost through digital access to part-related information.

Increased maintenance efficiency

- Connecting the maintenance staff and our product via a mobile smart phone application.
- Data on test adapters can be accessed even when it is disconnected from power supply.
- Faster operational features will be ensured via direct access to real-time part operating values.

Advanced digitalization

- TSK test adapters with innovative and intelligent data access.
- Getting paper less with an easy access to product information.
- State-of-the-art digital services for easy access via mobile tool and external online platform.

Technical data

Dimensions:	Depth: bis 245 mm
Top plate:	Width: 50 / 100 mm ... Height: 50 / 100 mm ...
Voltage:	Supply: 12 / 24 V DC LED: 5 / 24 V DC
Pneumatic:	6 bar
Accessories:	Unlocking units incl. NFC technologie Options: B+, leak test, length measuring pin, fiber optic, high voltage, 4-wire, vision and many more. Spring force tester FK50
