

Offshore Wind Foundations Alliance – Green Steel Statement

As the Offshore Wind Foundations Alliance (OWFA), we are steadfast in our commitment to spearhead the shift towards a more sustainable future. As an alliance, we want to encourage the further greening of our industry and ideally, we envision being CO2 neutral in the entire supply chain and manufacturing chain by 2050 with 100% green steel by 2040 at the latest.

As an industry we rely on the supply of green steel, and the demand from our client base who often hold the power to choose which steel we use. We call for further policy initiatives that promote green steel and its uptake in line with the Commission's objectives to reach climate neutrality by 2050. We firmly believe that proactive measures in that direction will play a pivotal role in substantially reducing our carbon footprint and fostering an industry that thrives on sustainability.
