

DARK WEB INSIGHTS & DARK WEB MONITORING FOR BUSINESSES

Shed some light on the dark web with best-in-class security protection for your organization and your people—without the extra hassle.

For admins

Easily detect, assess, and remediate security risks all in one place with **Dark Web Insights**. This dashboard gives IT admins access to real-time insights and alerts about security breaches facing all employees in your organization, along with simple actions you can take to remediate such threats.

With Dark Web Insights, you'll enjoy:

Risk visibility for all employees

Detect vulnerabilities among ALL employees, whether or not they have Dashlane.

Proactive approach to security

Real-time monitoring and automated alerts when new breaches occur, plus visibility into all vulnerabilities each employee needs to remediate with the Password Health tool.

Simple, effective remediation methods at your fingertips

Easily invite and onboard at-risk employees onto Dashlane and enable them to change weak and breached passwords in one click.

For people at your organization

Employees often use weak or recycled passwords because they're easy to remember, but unfortunately, this puts your company at risk. Empower your employees to improve their security habits—without adding to their workflow—with **Dark Web Monitoring**. Getting started is easy because their work email addresses are automatically enrolled and monitored. Plus, they'll receive alerts and next steps if their data is compromised.

With Dark Web Monitoring, employees enjoy:

No maintenance security

Dashlane automatically monitors the dark web for employees' email addresses and updates the list daily with any new credentials and passwords obtained from data breaches.

Protection for personal & work life

Real-time monitoring for up to five email addresses and alerts when passwords, bank account numbers, or any other data is found on the dark web.

Easy remediation methods

Employees don't have to be security experts to remediate breaches. After a breach, Dashlane recommends the actions they should take to secure all compromised accounts, then makes it easy to change compromised logins.

For more information on using Dashlane's dark web tools at your organization, [contact us](#) or [request a demo](#). Ready to get started? [Start a free trial now](#).
