

MAINTENANCE SERVICES

INSPECTION

Do you want to know if your products are still working as well as they should? What needs to be done? With our inspection service, we give your machines and test systems a complete assessment.

Your requirements

- Know the state of your equipment
- Be sure that your machines and test systems are OK
- Ensure the quality of our production
- Increase our productivity

Your benefit

- Comprehensive assessment with clear status information
- Faster reactivation of defective or discontinued machines and test systems
- Timely prevention of unplanned downtime
- Helpful information for investment and budget planning

Description

A thorough analysis of the condition of your machines and test systems includes a complete visual inspection – our service technicians use test devices and other methods to get a precise picture of the equipment status. We'll give you recommendations for maintenance as well as necessary measures to ensure that your Komax products once again function flawlessly and provide optimal quality, as well as tips on how to enhance performance.

Scope of services

- On-site inspection by Komax service technicians
- Analysis and interpretation of measurement data
- Documentation of the condition (Condition Report)
- Written report with specific repair and maintenance recommendations
- Cost estimate
