

TAIPAN

Air rifles with the Czech hallmark

Taipan is secured by the Czech company BULLET PROJECT s.r.o. Idea of producing our own air rifle was born during a meeting with two aeronautical engineers from Kiev. Shooting is our greatest hobby, the construction of our own air rifles was our dream. The development took for four years when producer designed each component from the trigger mechanism to the special anti-double feed mechanism. It is also worth to mention that one of them was in the development team of the legendary Antonov aircraft.

For easier conditions, production has moved to the Czech Republic. Here, we are carrying out 100 % of rifles assembly, strict quality control and accuracy. Taipans are dispatched from Hlucin's headquarters where they are also serviced. Our main goal of the brand is to offer the maximum functionality and great design. The accuracy is guaranteed mainly by Lothar Walther and CZ barrels from Česká zbrojovka. Stocks were designed in a place where they can do it best: wooden laminated in Italy, wooden beech in Spain.

Taipans leave the Czech Republic with their own ID card and a target with grouping on 40 meters. The company is standing by their rifles and staff. The proof is that in each piece you will find the name of a man who has tested it.

The most accurate Bullpup model

The modern Bullpup system is known for moving the magazine and chamber behind the trigger. The rifle may be shorter but the length of barrel remains the same. This will maintain accuracy and range and gain less weight for better control. Bullpup is mainly famous cause of the compact dimensions. Taipan itself is characterized by great workmanship, making it even better than other expensive rifles. It is also characterized by high quality materials and maximal accuracy. This is mainly provided by CZUB and Lothar Walther barrels. Taipan can be used with single-shot tray or magazines. In packing, you can find a single-shot tray and two magazines. Cocking through the side lever is very smooth and comfortable.

Taipan comes with two main innovations. The first concerns cocking area. Thanks to a special mechanism, barrel can not be blocked caused of a double feed. The second thing is a new air port, which is ideally and constantly pushing the air into barrel. An important prerequisite in the manufacture of this part was to avoid deformation of pellet, as in the standard solutions. And thanks to this a unique shape has been created just for the Taipan.

At the top of rifle we can find a classic 22 mm weaver rail for mounting optic system. Compared to previous models, it is inclined by 20MOA. Rail is made from one piece and therefore it is in the same axis with barrel. Taipan is already equipped with a great internal silencer, which will provide sufficient absorption while shooting.

Large-volume air tank of 292 cc is located under barrel. It passes through almost the whole rifle and ends with a Wika manometer. Current pressure is marked in BARs unit. Filling is through classic quickfill probe which is supplied with rifle. Taipan is known for one of the best trigger mechanism which offers variable resistance and dropdown adjustment. Manual safety can be found in the trigger guard. Whole stock is finished with rubber butt plate.

TAIPAN Veteran Short

The most compact model with total length of 600 mm ensures comfortable manipulation with rifle. Produced with beech stock only.

- caliber: 4,5 .177
5,5 .22
6,35 .25

beech stock

TAIPAN Veteran Sdandard

Classic dimensions of bullpup model which can be fitted into beech or premium laminate stock with logo engraved.

- caliber: 4,5 .177
5,5 .22
6,35 .25

beech stock

laminate stock

TAIPAN Veteran Long

The longest version offer 550 mm barrel and larger capacity of air tank. Models can be also fitted into classic beech or premium laminate stock with logo engraved.

- caliber: 4,5 .177
5,5 .22
6,35 .25

beech stock

Taipan features

- 0 % plastic parts**
 Stocks are wooden. Other parts are made of aeronautical aluminum and high-grade steel.
- Single-shot tray**
 Thanks to a single-shot tray you can use this rifle for very accurate shooting instead of hunting.
- For both right and left-handed shooters.**
 Cocking lever can be easily switched on the other side.
- No castings**
 All parts of the trigger mechanism are manufactured on CNC machines. Magazines are made manually.
- Unique trigger mechanism**
 Ensures simple setup of your trigger resistance and dropdown settings.
- Manual safety**
 Manual safety is located in trigger guard and prevents against unwanted shot.
- Barrel will not get blocked**
 One of the main innovations.
- The patented system**
 prevents double feed into barrel.
