

The Digital Employee Experience Checklist

Digital Employee Experience Management is a strategy used by IT to understand and improve the overall digital workplace. To reach this end, IT must be able to quantify and manage the components listed below. We recommend you compile sub-scores into one index metric to help you understand your Digital Employee Experience:

- ☐ **Device score:** Combined hard metrics and sentiment data tell you how well the device is performing and reveals how the employee feels about using it.
- ☐ **Business apps score:** Hard metrics and sentiment data are collected for business apps to understand their performance.
- ☐ **Productivity and collaboration score:** Hard metrics and sentiment data are collected for the productivity and collaboration score.
- ☐ **Employee satisfaction score:** Sentiment data is crucial to collect when determining an employee's job satisfaction.
