

Automation Vs. Orchestration

Your team is spending too much time on manual tasks and painful PowerShell coding.

Automation isn't enough. Unleash the power of orchestration.

Device Restart

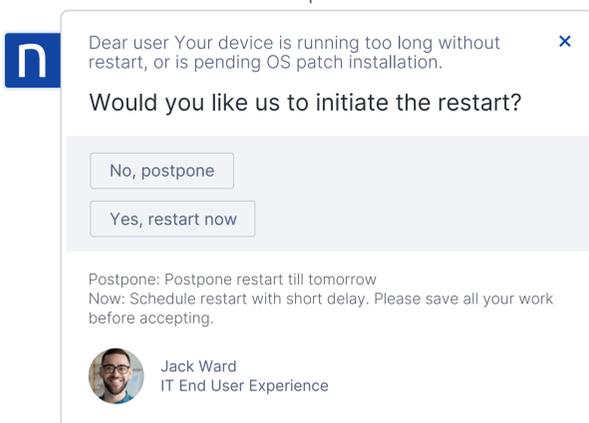

Automation

With task automation, this simple remediation still requires too much manual intervention—more than **20 minutes every time** you run it!

If this automation is wasting that much time, what about the more complex ones?

X **Manual action:** run report for all devices with last restart > 7 days.
EST TIME: 7 minutes per employee

X **Manual action:** select all devices and select campaign, "Ask user to restart." Send to affected devices.
EST TIME: 10 minutes per employee

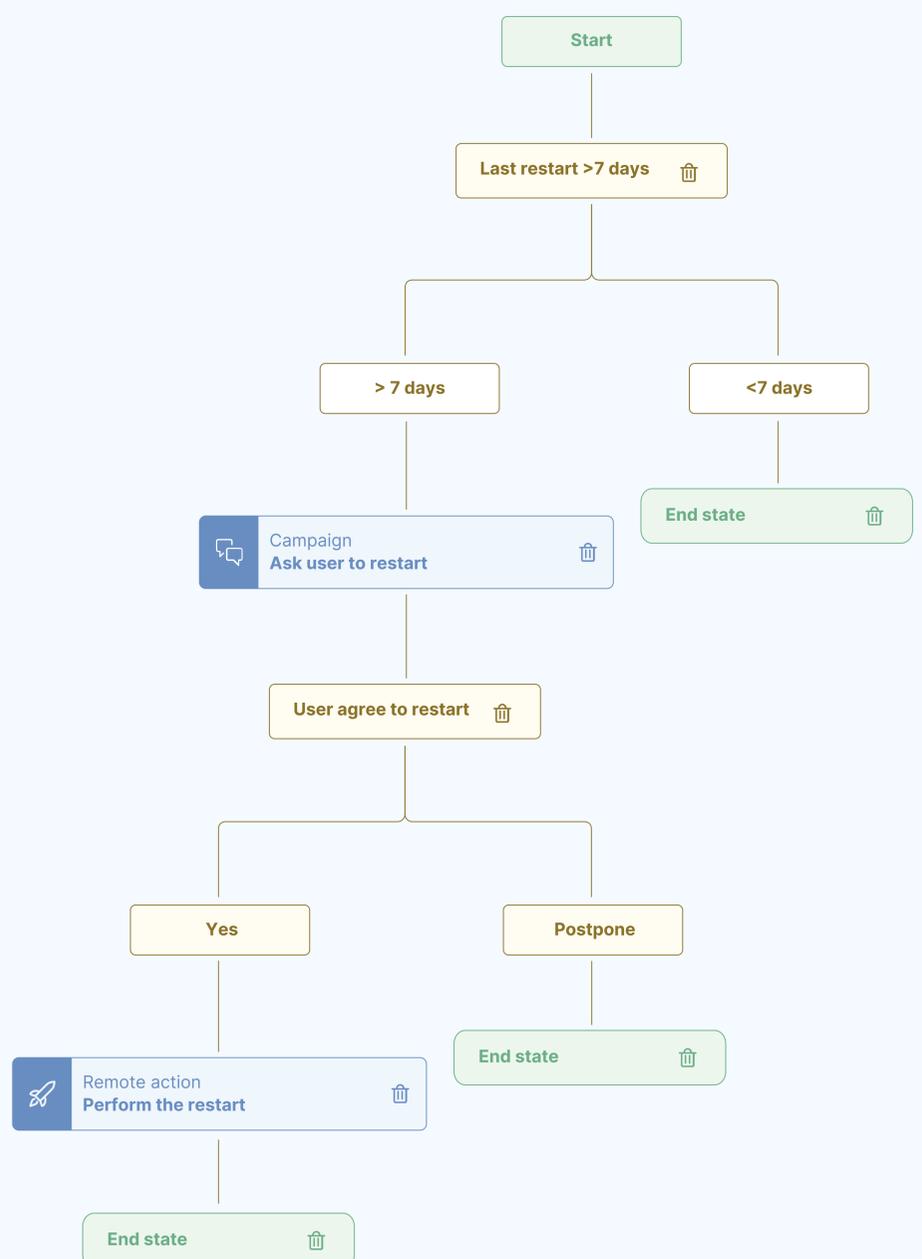

X **Manual action:** run report for all devices with last restart > 7 days.
EST TIME: 7 minutes per employee

Orchestration

With orchestration, the **entire process** runs automatically—with no intervention required by your IT team.

This workflow can also be programmed to run continuously ensuring devices aren't left out of date and susceptible to crashes and issues.

Automate Your Automations

Improve EUC efficiency with **Nextthink Flow**, a powerful, low code orchestration engine that improves the IT ecosystem by orchestrating multi-layer automated detection, communication, integration, and action with workflows to solve time consuming and complicated IT issues, freeing up EUC teams for more pressing, strategic work. Learn more at nextthink.com/flow.
