MIRA CC/IO

Mira CC/IO is a variant of the proven Mira wire stripper, which can be easily integrated into large crimp-to-crimp wire processing machines due to its special configuration. Currently the Mira 340, Mira 440 and Mira 440 3B models are available as CC/IO version. The Mira has remote modes with and without Miko. Both modes enable steering from the CC machine, but with a Miko connection you can directly send programs to Mira during production.

Versatile use

- High product availability, due to shared product platform
- Can also be used as a stand-alone
- No additional training for users when they are already used to Mira.

Added value without additional costs

- For the integration there is no additional application development necessary
- Komax delivers the Mira CC/IO pre-installed on Komax CC machines
- Compatible with Miko for article production

Useful features

- Standard product support
- In the stand alone mode, barcode scanning is possible to quickly select articles
- Quick mode when rotary incision is disabled

01

02

01
Space-saving integration – the swivel arm of the CC-machine can easily access the Mira.
02
Full Mira capabilities available in a Komax Crimp-to-crimp machine.

Available for Mira 340, Mira 440 and Mira 440 3B

Komax – leading the field now and in the future

As a pioneer and market leader in automated wire processing, Komax provides its customers with innovative solutions. Komax manufactures series and customer-specific machinery, catering to every degree of automation and customization. Its range of quality tools, test systems, and intelligent software and networking solutions complete the portfolio, and ensure safe, flexible, and efficient production.

Komax is a globally active Swiss company with highly qualified employees and development and production facilities on several continents. It provides local support to customers worldwide through its unique sales and service network and offers services that help them get the most out of their investments.
