Supporting the key elements of improvement

Identify key sources of value improvement

Value Driver Tree module clearly identifies key value levers, allowing live assessment of potential and technical limits, as well as expected impact of potential improvements.

Track improvements made and value delivered

- Central KPI database provides a 'single source of truth' and removes the admin burden of ensuring the right data is available every time, everywhere
- Set baseline and targets for financial and non-financial metrics – track actuals and benefits achieved in real time

Efficiently manage high quality improvement ideas

- Develop a robust pipeline of improvement ideas through defined stages from concept through to delivered value, including targets, idea definition, resourcing, planning and execution phasing
- Increase visibility of idea progress and value delivery to drive alignment and frontline ownership
- Easily implement and track ideas that deliver financial and non-financial benefits

Review improvement progress

- Cascaded reviews allow reporting up and down the line, bringing together information on improvement progress, emerging issues and value impact, as well as recording, distributing and tracking actions
- High levels of continuous improvement performance sustained through ownership and transparency

Manage the integrated improvement programme

- Programme-level view of performance improvement and value creation
- Interactive Gantt charts to plan ideas, allocate resources and track progress
- Incorporation of cross-programme dependencies to identify schedule risk or resource strain
- Cross-programme meeting and action tracking to assure continued focus
