

## Tic-tac-toe fuse beads game

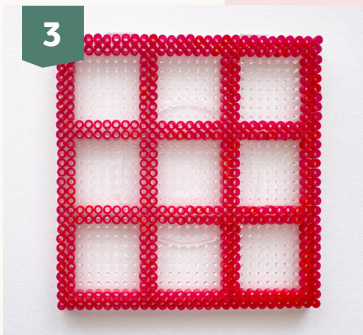

Learn how to create your own tic-tac-toe game using fuse beads. In this DIY, we'll walk you through the steps to craft a game board and pieces for hours of enjoyment with this classic game. Dive in and bring a touch of nostalgia to life with your own crafted tic-tac-toe game!

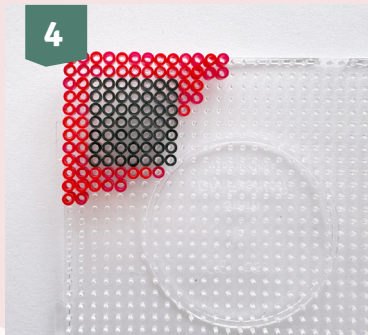

**1** Begin by crafting the game grid. Utilize a fuse beads pegboard and form a border of two rows of beads around the perimeter.

**2** Construct the grid by skipping 7 pegs each time and then placing two beads.

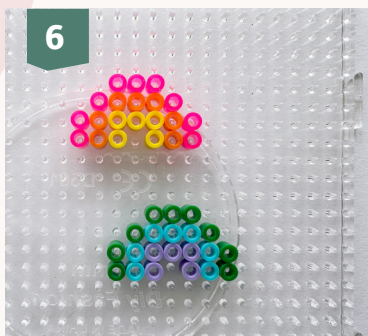

**3** Repeat this process both horizontally and vertically until the grid is divided into 9 equal squares. If you don't have an extra pegboard, iron the grid first before proceeding.

**4** Now, take another pegboard and create the game field. Follow the same steps, but this time fill the squares with black fuse beads instead of leaving them empty.

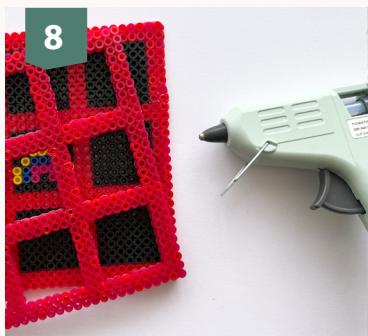

**5** Add a decorative rainbow in the center square. This step is optional.

**6** Next, fashion the game pieces in the shape of rainbows. Choose two colour combinations and create 5 pieces of each.

**7** Iron all components with a hot iron. Place a sheet of parchment paper between the beads and the iron to prevent them from sticking together.

**8** Then, glue the grid and game field together using a glue gun. Enjoy your homemade tic-tac-toe game to the fullest!
