

Nexthink Integration for Moveworks

Seamlessly enable the event-based integrations of Nexthink and Moveworks with Nexthink Flow

Flow enables intelligent cross solution communications by translating device-oriented issues and findings into Moveworks' end user communications.

Flow leverages direct API calls to Moveworks to:

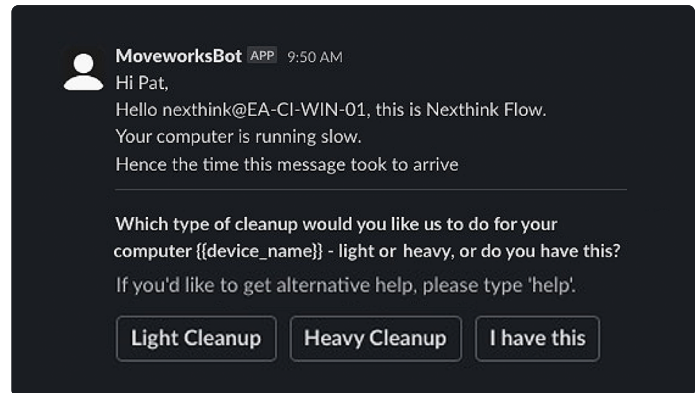

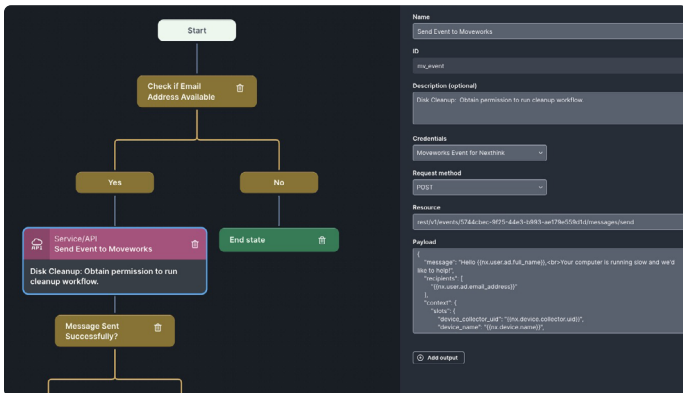

Request permission
for actions

Inform the user of the action success
or any issues encountered

Trigger automated workflows
for real-time remediation and self-help

Why Nexthink Flow?

Only Flow ensures Nexthink users achieve their desired Moveworks use cases with rapid speed, continuous support, and set costs.

- Increases time to value with a dedicated team to deploy integration without delay.
- Lower total cost of ownership with fixed costs versus variable consulting fees.
- Greater value realized with Flow's bi-directional communication versus one-way Webhook driven events.
- Full Nexthink and Moveworks support of one integration versus managing three or more solutions.
- Less risk with Flow's out of the box configuration versus any custom third party integrations.
- Better responsiveness to changing IT conditions with Flow's real-time event trigger.

The Nexthink Flow integration between Nexthink and Moveworks removes unnecessary obstacles and ensures each of these proactive IT tools can deliver unmatched proactive IT for an even faster employee resolution. Contact your Nexthink team to learn more.
