

MAINTENANCE SERVICES

CALIBRATION

You want certainty that your machines and test systems from Komax produce exactly the quality they promise? Or be sure that your quality testing systems reliably detect any deviations from the target and values within the tolerance? After our calibration, we confirm proper functioning with a certificate.

Your requirements

- Deliver the promised quality
- Produce with higher and more consistent quality
- Ability to measure exactly the quality of our production
- Certified quality measurement devices

Your benefit

- Improved quality control
- Traceability
- Simplified audits

Description

To guarantee the proper functioning of your test systems, they should be regularly checked and calibrated – with the calibration, we verify and document that the product fulfills our specifications and maintains specified tolerances. This is the only way to guarantee that the machines can fulfill your own quality standards and those of your customers. The calibration takes place at your location; alternatively, you can send the modules to be calibrated to your regional Komax location.

Scope of services

- Visual inspection of the machines and test systems to be calibrated
- Technical verification and calibration
- Documentation of the calibration with a certificate
- Marking of the calibrated modules and devices with a test sticker (inspected by Komax specialists, with the date of the next calibration)
