

Air rifles with the Czech hallmark

Air rifles with the Czech hallmark

Taipan is secured by the Czech company BULLET PROJECT s.r.o. The idea of producing our own air rifle was born during a meeting with two aeronautical engineers from Kiev. It is also worth mentioning that one of them was in the development team of the legendary Antonov aircraft. Shooting is our greatest hobby and the construction of our own air rifle was our dream. The development took four years and each component was thoroughly researched and designed.

The production eventually moved to the Czech Republic to make things easier. Here, we are carrying out 100% of rifle assembly with strict quality control and accuracy. Taipans are dispatched from our headquarters in Hlučín (Czechia), where they are also serviced. Our main goal is to offer the maximum functionality and great design. The accuracy is guaranteed thanks to the barrels from Lothar Walther and CZ. Stocks were designed in a place where they know how to do it best: in Italy and Spain.

Taipans leave the Czech Republic with their own ID card and a target with grouping on 40 meters. The company is standing by their rifles and staff. The proof is that in each piece you will find the name of a man who has tested it.

TAIPAN SLASH

NEW

Subtle design, semi-automatic firing mode, outstanding performance.

These are only some of the many strengths of the revolutionary PCP airgun that just came out of our production line.

At first glance, it's clear this bullpup is not just another follow-up to the Veteran lineage. This is a completely new air rifle, designed from the ground up with zero carryover parts from its predecessors. That is why, instead of calling it the Veteran III, the creators gave it a short and fitting name, the SLASH.

The crucial element of our new flagship is its semi-automatic firing mode, allowing you to fire up to 12 shots in quick succession. Combined with a new, patented revolutionary valve with extraordinary opening and closing speed, this masterpiece offers superior performance while maintaining minimal air consumption. A cherry on top is the ability to fire slug ammunition without any necessary tweaks.

Overall, the entire airgun is a masterful synergy of top-tier performance, groundbreaking innovation, and premium craftsmanship. Every detail - from the carefully selected high-grade materials that ensure long-lasting durability and reliability to the refined engineering that guarantees flawless operation and accuracy - speaks to an uncompromising standard you won't find in any other rifle.

Main Features

- semi-automatic firing mode
- new valve with extra-low air consumption
- externally adjustable pressure regulator
- detachable 12-round magazine
- shrouded barrel with integrated sound moderator
- 20 MOA canted Picatinny rail
- easily replaceable AR-15 grip
- 300 cc & 300 bar carbon fiber bottle
- low-profile yet sturdy metal design
- unique decocking ability

TAIPAN VETERAN II STANDARD

Unique and innovative pcp bullpup

If you have ever shot or handled the Taipan Veteran, you know how well-made and accurate it is. Although we were more than happy with the reception and results the Taipan Veteran received, we didn't want to rest on our laurels.

LAMINATE STOCK

It is so much more than just an upgraded version of the first-gen Veteran. Think of it as a completely new rifle, which builds upon the success of its predecessor and takes it even further. Since 2025, we began producing an updated version of the Veteran II which includes several tweaks:

The modified version is newly equipped with the popular ADF (Anti Double Feed) system, which prevents loading a pellet into the barrel if there is already one inside.

Additional changes apply to the side lever handle, which now offers a tactical look with a grooved surface. However, if you prefer the original one, you'll find it in the package as well.

Main Features

- ADF (Anti Double Feed) system
- New side lever with tactical look
- Free Floating Barrel - Increased accuracy in all conditions
- New forward reload lever with ambidextrous design
- 22mm weaver rail which is inclined by 20MOA
- Unique trigger mechanism
- 40mm diameter of airtube with 311cc capacity
- New bigger silencer
- Available with laminate stock
- Available with 550mm or 700mm CZ/LW Polygon barrels
- Single shot tray included

TAIPAN VETERAN II TACTICAL

New tactical version

The “tactical” iteration of the Taipan Veteran II rifle is aimed at customers who prefer a more modern and tactical look and want something a bit more unorthodox.

LAMINATE STOCK
ALSO AVAILABLE IN SYNTHETIC STOCK

Taipan Veteran II Tactical comes outfitted with a 480 ccm kevlair bottle for increased air volume. The free-floating barrel is fully shrouded and has an extended sound moderator. You can also swap it for the shorter moderator, which comes with the Standard variant.

Both moderators are interchangeable. The AR-15 pistol grip gives this model great ergonomic properties and can be swapped for any commercial AR-15 grip. The synthetic buttstock features an adjustable rubber butt pad for increased comfort while taking aim and shooting. You can also choose between 550mm or 700mm barrels from CZ/LW Polygon.

New Kevlar cartridge, which allows you to detach it under pressure without having to drain any air. This will be particularly appreciated by anyone who likes to carry spare cartridges on them.

Main Features

- ADF (Anti Double Feed) system
- New side lever with tactical look
- Kevlar cartridge which allows you to detach it under pressure
- Free Floating Barrel - Increased accuracy in all conditions
- New forward reload lever with ambidextrous design
- 22mm weaver rail which is inclined by 20MOA
- Unique trigger mechanism
- Changeable AR15 grip
- 480cc kevlair air tank and total air capacity 675cc
- AR-15 pistol grip and synthetic buttstock with adjustable butt pad
- Available with 550mm or 700mm CZ/LW Polygon barrels
- Single shot tray included
