“At JRF, we’re always exploring what other datasets are out there that could unravel inequality, its dimensions and fluctuations. I’m very pleased to announce a working partnership with Smart Data Foundry as we embark on a journey to explore how banking data can be applied to achieve social change through the creation of an Income Volatility dashboard and by creating safe and secure access to research-ready financial data through a new trusted research environment.”

ROSARIO PIAZZA

Chief Insight Architect, JRF

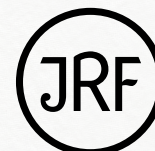

OVERVIEW

Smart Data Foundry is partnering with Joseph Rowntree Foundation (JRF) to help them achieve their mission to support and speed up the transition to a more equitable and just future, free from poverty, where people and the planet can flourish. Key to this is access to quality data for research that creates impactful insights that policymakers can rely on to make evidence-based decisions to help those most impacted.

APPROACH

We have built a dashboard for JRF using near-real-time de-identified banking data from over 1.2 million customers. The dashboard shows income volatility stretching back to 2019.

We have also built a trusted research environment (TRE) for JRF that will enable safe and secure access to de-identified banking data to facilitate impactful research in support of their social impact missions.
