TSK CONNECT SMARTPHONE SOFTWARE

The TSK Connect App is now available in the Apple Store for iOS and Google Play Store for Android.

Features

As part of the TSK Connect product, the smartphone software is the next step into advanced digitalization for wire harness testing.

Each Intelligent Module knows his functionality, history, project settings and many more data that are immediately available on the user smartphone.

Implemented functions

- Test Module Information: Factory Settings; Customer Order Information; Connector Information; Project Settings; Module Specific Function; Customer Remarks; Test pin article number
- Multilanguage
- Off-line mode to access the NFC tag data
- Customer data protection: Each organization can only access their own NFC data; NFC encrypted data (read/write)
- Access to TSK Direct platform to access additional product digital information (e.g., drawings, wiring and pneumatic diagrams, spare and ware parts, ...)

How to use?

Read data from test adapter [Module] by NFC or scanning barcode form chassis.

Information's

- **Module no.:** Customer's material no., connector no., XCode, X + Y coordinate
- **Module configuration:** Link to TSK Direct (to get more online documents), Module system, version, size, number of shapes, number of cavities with TP, date of manufacture, place of production, test pin article number (incl. counter), switches, notes
- **Order Details:** Order ID, Pos no., Pos. date, customer no., order no., material no.
- **Connector information:** Connector no., TSK no., number of cavities with TP, TPs per cavity, TPs per switch, airbag type, fiber optic type, high voltage type
- **Project settings:** XCode, X coordinate, Y coordinate, system number, table number
- **Module specific function:** Air leak test (incl. parameters)
