

REPAIR + PARTS SERVICES

WEAR PARTS

Wear parts are generally those components that wear out faster than the machine itself due to high stress. With a timely renewal of these components, the service life, safety and potential of the machine can be fully exploited. Komax offers the right, original wear parts quickly and reliably, so that production downtimes due to maintenance can be kept as short as possible. Take advantage of our delivery capabilities: some 80% of all wear parts are available regionally or locally; for all other parts, we keep you stocked with express deliveries.

Your requirements

- Premium-quality wear parts
- High availability of all wear parts
- Defective machines and test systems should be quickly up and running again.
- Fewer breakdowns
- Avoid or shorten downtimes

Your benefit

- Maximum availability through the use of original parts
- Minimization of unplanned production downtimes
- Short downtimes thanks to high availability of wear parts
- Longer service life of machines and test systems thanks to the delivery wear parts at least 7 years after the discontinuation of production
- Fastest possible rectification

Description

With original wear parts, you can be sure that they are conform to our quality standards – so you can ensure stable production with consistent high quality, lengthen the service life of your machine and reduce the probability of unplanned downtimes. Contact your local Komax service center – in all likelihood, the wear part you need will be in stock and at your location in shortest time.

Scope of services

- Identification of the required wear part
- Express delivery
- Wear part availability at least 7 years after the end of production by the Komax Group
