WORK EXPERIENCES

IBM Thailand – Frontend Developer

Oct 2020 - Present

- Designed, developed, and maintained responsive web applications using a tech stack centered around HTML, CSS, JavaScript, and Typescript.
- Specialized in the Angular framework with a particular focus on Material UI, crafting visually appealing user interfaces.
- Integrated RESTful APIs and third-party services to extend application functionality and enhance user interactions.
- Utilized Angular to create an onboarding service for leading Thai banks, encompassing account opening, sales, and subscription onboarding for juristic companies.
- Developed an Angular project for banking clients, simplifying data processing through Excel data import and automated document generation, reducing manual efforts.
- Created MVP features through close collaboration with cross-functional teams including business units, analysts, backend developers, and designers, ensuring rapid client-driven feature deployment.
- Tracked development progress using diverse tools, including Miro, Jira, Slack, and Figma, ensuring transparency and accountability throughout project lifecycles.
